

PATH-AWAY HAPPENINGS©

Dateline April 30, 2017: April Happenings

China Project

We started the month off organizing a product supply chain for the China project to keep product flowing in line with demand. The current 30 sites will be expanded to 1,000+ sites by 2025.

On site outside of Shanghai, China with the local staff as we begin to assess the pathogen situation and how to address it.

This antiquated, inefficient system will be replaced with The M3 System© in the future.

Corporate Jet

This Cessna Citation II belonging to a private charitable foundation is a perfect example of the diversity of our expertise.

One of the founders of the foundation had experienced respiratory issues on recent flights. It was of high concern on extended flights. The person has chemical sensitivities as well as allergies that are exacerbated by the presence of mold and other fungi.

With our Mechanical as well as Environmental and Biological Engineering expertise we knew exactly where to look for the offending pathogens.

Proper sampling and outstanding analysis by a fully accredited laboratory identified and quantified the problem.

Due to the nature of the person's sensitivities we were able to recommend implementation of a protocol utilizing a fully organic, non-GMO, chemical, and alcohol and drug free product to solve the problem once and for all.
