

PATH-AWAY HAPPENINGS

Dateline February 15, 2017. South Carolina Corporate Headquarters

It has been a busy month here at Path-Away®. We continue to receive high accolades from various users in different applications for the product.

As the information and success spreads Art is asked to do more and more seminars and Keynote talks. Art recently returned from another trip to Shanghai, China where we are strengthening or joint venture with China/Malaysia in providing services and product to the China government projects.

A professional marketing piece on Path-Away® Aerosol Solution and The M3 System Distribution Module will be incorporated into the Shanghai partner product literature. We will provide not only product but engineering services as well for all structures and applications.

Art got a firsthand look at some systems that are already installed and has come up with some modifications to improve system efficiency and product delivery for maximum results. Our diversified background in both engineering and biological sciences gives our clients a competitive edge on their competitors.

”Fascination with Plants 2017”

Art had the distinct pleasure in May of 2014 to be the Keynote Speaker at the global Fascination with Plants event held in Daet, The Philippines. Much has happened since then.

Working in partnership with Camarines Norte State College and their superb staff of Plant Pathologists and Phyto-Bacteriologist, Path-Away® has proven incredibly effective solving problems with pineapple and coconut growers. Research work has been done on strawberries and sugarcane crop yield issues are being addressed.

This year’s conference being held in mid-May will see the Path-Away® / CNSC Joint Partnership Product Launch. Government as well as private farmers will be in attendance. International guests and companies are expected to attend.

Watch here for updates on some exciting projects getting underway globally.
